

# Additional Information to G3 Fax

**Note:** Fax pin activation is not required from firmware version R01.6.3 or higher.

By default, the settings for the RJ11 port are configured as follows:

- Incoming Call - “3.1kHz high quality voice/fax call”
- Outgoing Call - “Standard voice call”.

## Sending an Outgoing Fax

Dial String Format:

**2\*<00><Country code><Area code><Fax number><#>**

## Making an Outgoing Voice Call

Using handset from fax machine or Primary Handset (Highly recommended)

**<00><Country code><Area code><Telephone number><#>**

### **Warning:**

**DO NOT** include the prefix 2\* for outgoing voice call. Otherwise, it will result in high billing as the call is billed as 3.1 KHz high quality voice call.
