**ADDVALUE AND CLOUD CONSTELLATION ANNOUNCE NEW COOPERATION  
AGREEMENT IN SUPPORT OF  
SPACEBELT SATELLITE CONSTELLATION DEVELOPMENT**

---

**Singapore, October 29** - Addvalue Innovation Pte Ltd, a wholly-owned subsidiary of SGX Mainboard-listed Addvalue Technologies Ltd (“**Addvalue**”) (SGX: A31), and Cloud Constellation Corporation (“**Cloud Constellation**”) today announced a partnership focused on development of satellite products and services in support of Cloud Constellation’s SpaceBelt™ Data Security as a Service (DSaaS) cloud services. Pursuant to a cooperation agreement signed at the International Astronautical Congress (IAC 2019) in Washington D.C. last week, Addvalue will lend its satellite communications expertise to the development and manufacture of SpaceBelt satellite communications terminal, as well as supporting design activities related to Cloud Constellation’s inter-satellite communication protocols and a high performance, space-resilient, software-defined, embedded hardware solution capable of supporting edge computing for artificial intelligence (AI) and blockchain applications.

Cloud Constellation is poised to offer the world’s first cloud infrastructure and data storage service, based entirely in space. The company’s patented SpaceBelt architecture utilizes GEO partner’s satellites to securely transfer data between the customer’s enterprise location(s) and the SpaceBelt LEO network. This provides the strongest data security possible by offering global isolation from the terrestrial infrastructure of an enterprise or government organization’s high value, highly sensitive, mission-critical data assets.

Addvalue is uniquely equipped to provide Cloud Constellation with the satellite communications expertise required to enable direct and secure transfer of data stored on the SpaceBelt constellation, given the company’s recent success in its own Inter-satellite Data Relay System (“IDRS”) that offers LEO satellite operators an on-demand real time connection to their satellite constellations. *“This is exactly the type of next-generation LEO satellite communication technology that Cloud Constellation will need to ensure SpaceBelt’s*

*success; and so, it is with great excitement that we announce the collaboration between our companies,”* said **Cliff Beek, Cloud Constellation’s CEO**.

Today’s announcement is but the first step in the partnership between the companies. **Dr Colin Chan, Addvalue’s CEO** commented, *“We could not be happier about joining the group of industry leaders selected by Cloud Constellation to participate in the development and launch of their SpaceBelt Constellation and DSaaS cloud services. We hope that this new partnership, which begins with engineering services, will continue for years to come in the form of a design, manufacturing and distribution partnership for the SpaceBelt services.”*

### **About Addvalue Innovation**

Addvalue Innovation Pte Ltd, a wholly-owned subsidiary of SGX Mainboard-listed Addvalue Technologies Ltd (A31), is a leading satellite-based communication solutions company. Addvalue provides state-of-the-art communication terminals for use in space, in the air, at sea and on the ground. The company also offers extensive engineering and integration services to its customers. Addvalue’s expertise extends far beyond where the world’s terrestrial networks end. Whatever the market or application, the company’s wide range of satellite-based products and services is sure to offer the right technology to drive enhanced connectivity.
